

Water Heater RA-0500 230V 500W

Reference: 00706161

Water heater for generator sets RA-0500

Suitable for water heating in diesel engines with closed-circuit cooling.

The heater prevents the temperature of the cooling circuit from falling below a certain value. This value is controlled by an internal thermostat. A second internal thermostat protects the unit from overheating.

Key features of the heater RA-0500

- Direct fixing, no bracket required
- Presence of a coolant drain plug
- Standard power cable 3 meters long
- Special cataphoresis coating that protects it from the glycol.
- Excellent dielectric strength
- Connections facilitated by the presence of a cable
- Temperature maintenance by internal thermostat: a second thermostat protects the apparatus from possible overheating phenomena
- Suitable for direct mounting on the motor.

Technical Sheet

Phase	Single phase
Frequency (Hz)	50
Voltage (V)	230
Single-phase power (KW)	0,5
Power (W)	500
Length (mm)	163
Width (mm)	92
Height (mm)	239,5
Product type	Scaldiglia
Weight (Kg)	1.1
