

Idromar Automatic Panel

Reference: IDROPANAUT

Idromar Automatic Panel

The automatic panel can be used in the Junior series systems and in the MC5s. To install this panel, the watermaker must also be automated for washing the membranes via a motorized valve installed on the pre-feed pump and other small changes to the system itself.

The panel is used to turn on, turn off, reset, wash the membranes, view the alarms in the event of anomalies and view the operating pressure of the system all remotely.

The panel is supplied with 30 meters of cable.
