

SCHENKER MINI TOUCH PANEL

Reference: SCPAMNTC

SCHENKER MINI TOUCH PANEL

The Schenker Mini Touch Panel is a compact remote control panel designed for marine watermakers, ideal for installations on boats and yachts. It offers an intuitive touch interface to manage advanced fresh water production, maintenance, and monitoring functions.

Main Features

Remote control: Remote start/stop, automatic start, and timer to program production.

Flushing functions: Automatic, intensive, and periodic to keep the system clean and prevent scale.

Monitoring: Hour meter to track operating hours and pressure gauge to monitor performance.

Dimensions: Compact, measuring 100x76 mm, easy to install in tight spaces.

These features make it more advanced than the Basic panel, with touch options for more user-friendly use.

miniTOUCH control panel

New control panel with touch screen, **based on the BASIC electronic board (it is not possible to add the monitoring kit)**, touch user interface, the ability to view alarms via Messages, simpler and more intuitive access to BASIC functions at a competitive price.

It will work exclusively with the BASIC board. All systems equipped with a Basic panel (two buttons) produced after **January 1, 2026** are ready for installation of the miniTOUCH; **units produced before that date require a software/hardware update** to use the miniTOUCH.
